

DeviceVM and Lenovo Expand the Range of Quick Start Netbooks

Splashtop instant-on platform featured in the Lenovo IdeaPad S10

January 6, 2008, SAN JOSE, CA – DeviceVM, the maker of the award-winning Splashtop™ instant-on platform, announced that Splashtop is now available on the Lenovo IdeaPad S10 netbook. This expands the range of Lenovo netbooks with instant on functionality to include the popular global consumer netbook line. Lenovo has branded Splashtop software as “Quick Start” on their products. Lenovo first introduced Quick Start in October on the IdeaPad S10e, a netbook targeted at the education market.

With Splashtop, IdeaPad users can surf the web, check email, chat online or video conference seconds after turning on their netbooks, all without starting a traditional operating system. In addition, the Quick Start environment provides an easy way for IdeaPad users to connect to other Quick Start users and share ideas, using a feature called Lenovo Social Media.

“Netbooks continue to gain share of the worldwide PC market, as demand for web-centric computing grows,” says Mark Lee, CEO and co-founder of DeviceVM. “Together with Lenovo we address the netbooks users’ desire for a simple and immediate web experience.”

Splashtop has been shipping on millions of motherboards, notebooks and netbooks, desktops and nettops. DeviceVM is exhibiting the latest Splashtop-enabled devices at Innovations Pod 200 in the Sands Convention center in Las Vegas. Please contact us to setup a demo while you are at CES.
