Splashtop Agentic Packr

AI-powered app packaging and deployment for modern IT

Package, validate, and deploy applications via Microsoft Intune, SCCM and more — with far less manual effort and much stronger governance.

Why choose Splashtop Agentic Packr

Faster, Better. Easier App Packaging

AI reads installers, writes detection rules, and tests every build automatically — no manual scripting or packaging expertise required. Built on PSADT so you can open, review, and adjust as needed.

Stronger Security and Governance

Every package is validated, scanned, and tracked with a full audit trail built in. Further secure access with granular role-based control and SSO integration.

Simpler and More Powerful Intune

One console for packaging, deployment, and updates — with broader and better third-party app coverage.

Best-In-Class Customer Experience

Work with a sales and support team that's fast and responsive from trial through post-purchase support. Call, chat or email in and talk to a real person, anytime.

For IT and MSP teams looking to:

Get hours back every week
Stop writing installers, scripts, and detection rules for every new app and every update.

Close vulnerability gaps faster
Keep all apps patched and current, so outdated software stops being an easy way in for threat actors.

Roll out updates with confidence
Know a package is safe and it works before it reaches users, and be in control of how it is rolled out.

Cover every Windows device
Manage every app on Intune devices, SCCM devices, and machines outside both through one console.

Key features

- **Automated app packaging:** Access verified third-party apps from a WinGet catalog, and package anything else using a package ID from Chocolatey/WinGet or custom installer.
- **Seamless Intune deployment:** Connect your Intune tenant in one click with Express connection, publish apps to managed endpoints, and track per-device rollout status.
- **Deploy beyond Intune:** Bundle install, update, and uninstall actions to deploy on any Windows machine manually or with SCCM.
- **Automatic version updates:** Detect and build new app versions automatically, keeping deployed software current with minimal admin effort.
- **Tested, verified and security-scanned:** Every package is tested on a clean VM, then run through a security scan. Review the QA scorecard and logs before anything is published.
- **User and access control:** Assign role-based access control, and enable authentication and automated user provisioning via Entra ID.
- **Control end-user experiences:** Customize notifications, install/update deferrals, restart prompts, grace periods, and company branding with reusable templates.
- **Company portal:** Enable end users to install and uninstall approved apps on demand via Intune's company portal.
- **Comprehensive visibility:** Stay in control and get complete visibility into apps, monitor ongoing and completed packaging jobs, easily investigate failed jobs, and audit events.

From installer to Intune in six automated steps

1. Fetch metadata
2. Analyze installer
3. Build PSADT package
4. Test on a clean VM
5. Build Intune package
6. Publish to Intune

Licensing

Free Plan

- Full-featured free for up to 100 endpoints
- Full public catalog apps access
- 5 custom packages per month
- Self-service knowledge base

Paid Plan

- 150 endpoints minimum, tiered volume pricing
- Monthly or annual billing
- Unrestricted app packaging*
- Technical support included
