

## Help Customers Modernize Secure Network Access with Foxpass

Deliver secure Wi-Fi, VPN, and certificate-based access as a repeatable, cloud-managed service.

Customers are modernizing network access, reducing reliance on legacy infrastructure, and looking for stronger authentication that fits their existing identity and device management environments. Foxpass helps MSPs deliver secure network authentication, Cloud RADIUS, Cloud PKI, and LDAP services without deploying or maintaining on-prem infrastructure.

### Expand your security services:

Add managed network authentication and certificate-based access without specialized PKI expertise.

### Create repeatable revenue:

Package Wi-Fi, VPN, identity integration, and certificate deployment as ongoing managed services.

### Standardize delivery:

Support customers across Microsoft Entra ID, Google Workspace, Okta, OneLogin, Active Directory, LDAP, and SCEP-capable platforms.

### Reduce operational overhead:

Help customers move away from maintaining on-prem RADIUS, LDAP, and certificate authority infrastructure.

### Common Customer Challenges

- **Legacy access creates risk:** Shared Wi-Fi passwords, aging RADIUS deployments, and manual workflows can create security gaps.
- **Certificate management is hard to scale:** Manual issuance, renewal, and troubleshooting add work for lean IT teams.
- **Customers want stronger security without more infrastructure:** Teams need modern authentication without deploying or maintaining additional on-prem systems.

### What Foxpass Delivers

- **Cloud RADIUS:** Secure Wi-Fi and VPN access tied to each customer's identity provider.
- **Cloud PKI:** Certificate-based authentication, automated certificate issuance, and easier lifecycle management.
- **Cloud LDAP:** LDAP services for VPN and application use cases without dedicated directory servers.

### Best-Fit Customers

- **Ideal fit:** SMB and mid-market businesses, cloud-first teams, multi-site organizations, and education institutions.
- **Common triggers:** Replacing legacy RADIUS, adopting certificate-based authentication, supporting Zero Trust initiatives, or reducing on-prem infrastructure overhead.

## Security & Compliance

- **SOC 2 and ISO certified:** Foxpass gives MSPs a certified security foundation they can confidently position with customers during vendor risk and trust reviews.
- **Supports GDPR and regulatory conversations:** Help customers strengthen access controls for Wi-Fi, VPN, and certificates while supporting compliance-driven discussions around authentication, data access, and infrastructure modernization.
